Subcase No. E-3907

...A lubricant is a liquid or solid...
...machines...
...oil, transmission fluid, hydraulic fluid, grease...
...process oils, metal removal treatment, protective and forming...
...In order to manufacture a lubricant, UMA member companies extract oil and synthetic...
...UMA...

POS base oils are divided between Castro and POS. This allocation can be significant because

the amount of POS base oils is divided among the following categories:

1. POS base oils used in the production of motor oils

2. POS base oils used in the production of industrial oils

agreement with ExxonMobil could replace these volumes of base oils being taken off of the market.

redacted by ExxonMobil in the public record copies in fact satisfies the Commission's rules as to

confidential business information.

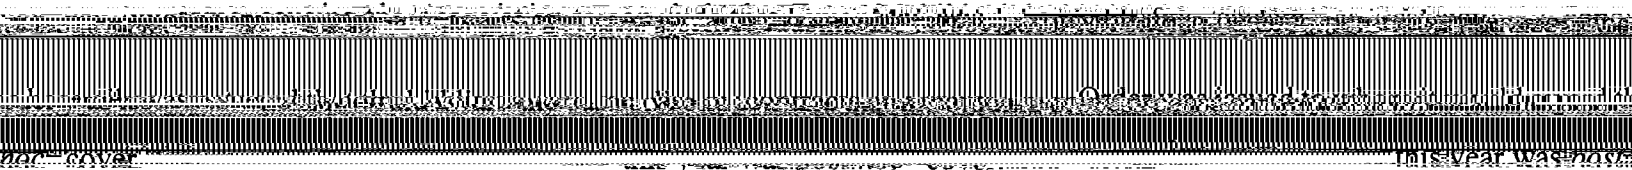

Another factor to bear in mind is that BP Amoco has announced its intent to acquire Castrol

While BP Amoco currently does not refine base oils in the United States, worldwide exchange and

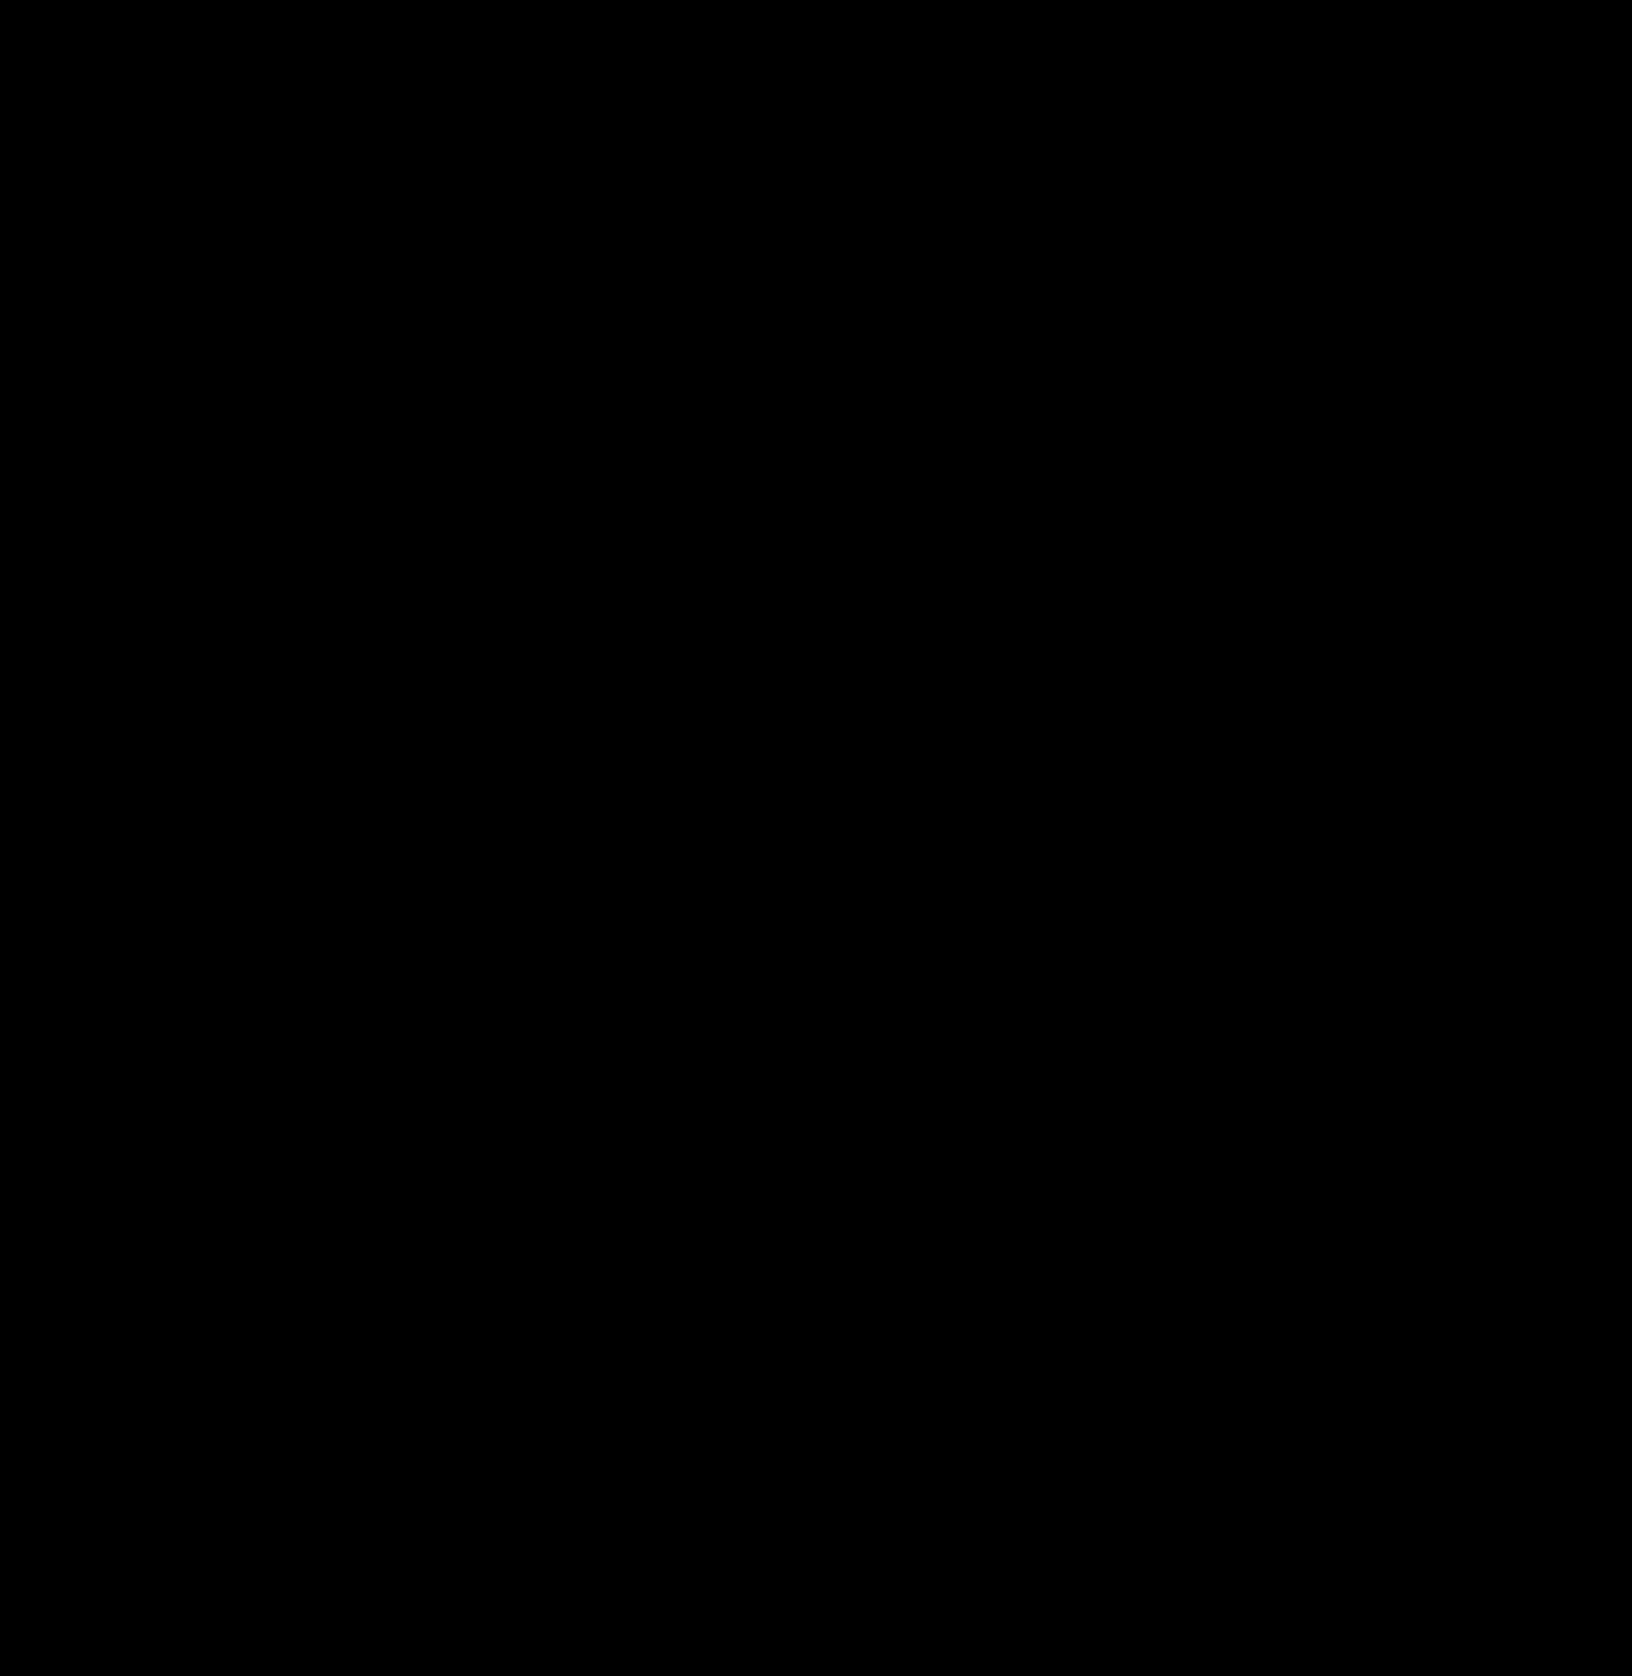

world.

ExxonMobil also should review CAROLINE. In reviewing ExxonMobil's Application, the Commission also should

base oil price increases (approximately 60 cents per barrel) - largest base oil competitor, ExxonMo

... n determining whether a competitive base of markets will exist for independent contractors ...

keep a sufficient number of competitors in the market and these supply contracts will be

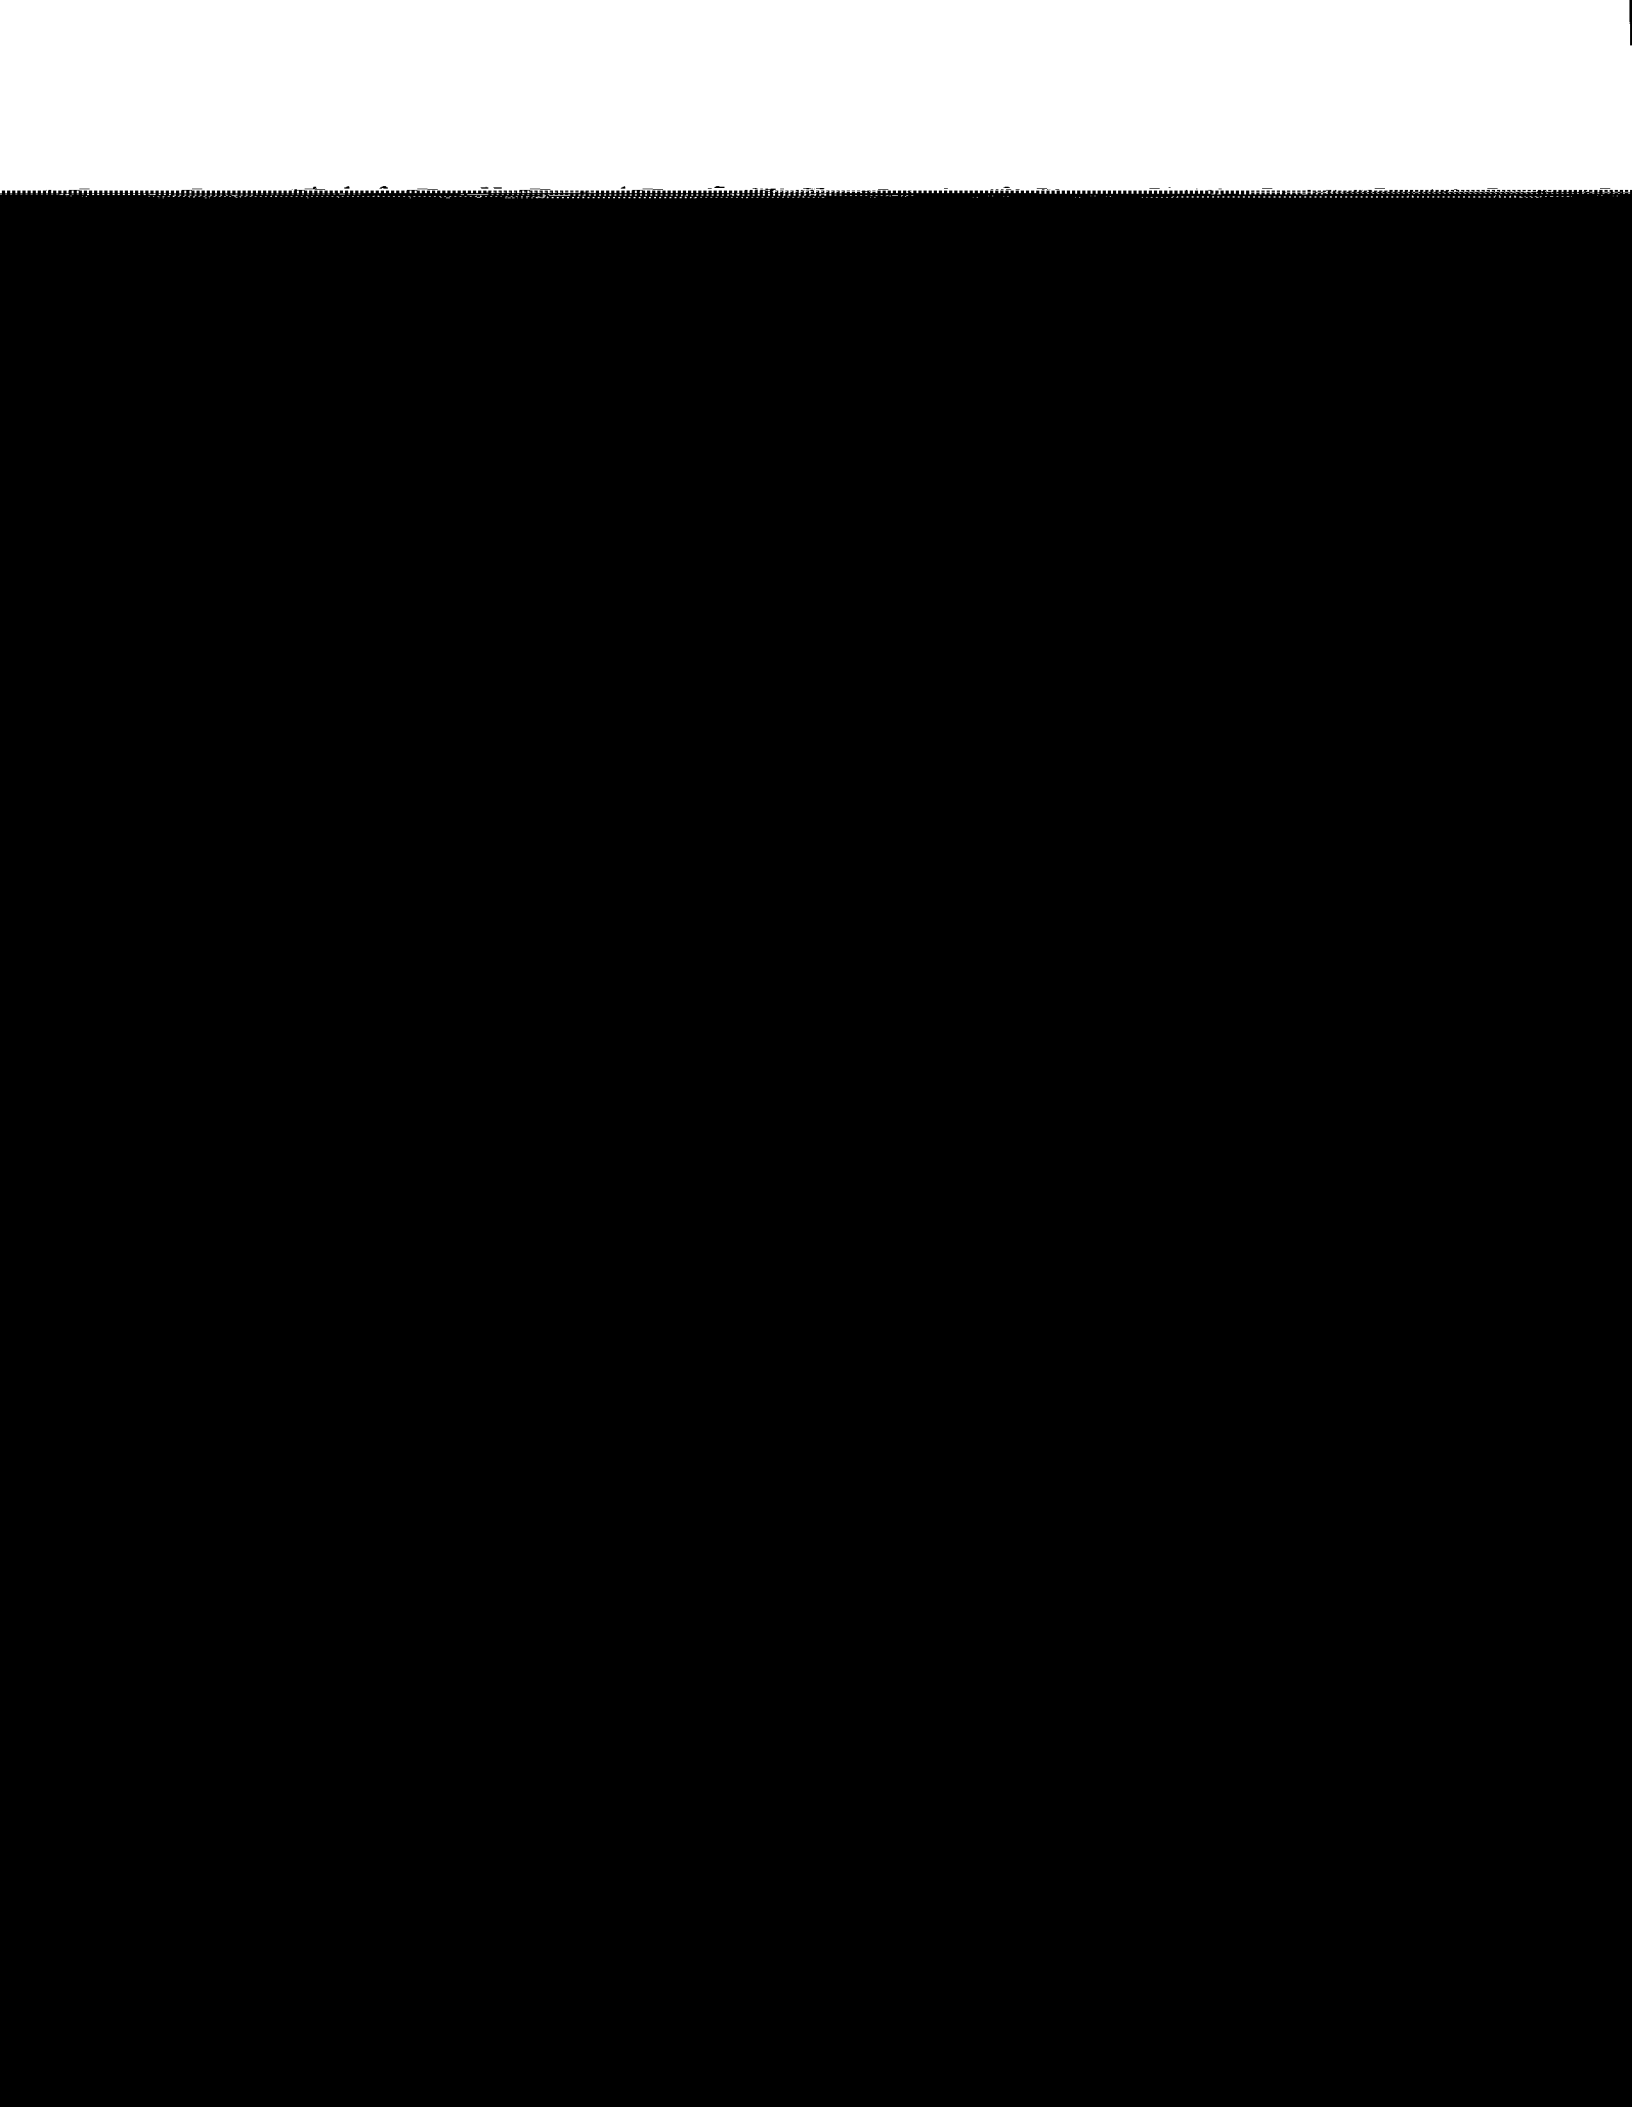

at least a fair market for paraffinic Base Oil. The issue is not the number of players in the market.

Mobil has not met its burden in its Application to prove to the Commission that the proposed merger will not result in a substantial lessening of competition. Ex-

hibit A, which is a key document in the Commission's record, shows that the proposed merger will result in a substantial lessening of competition. The Commission should reject the Application.

The Commission should also reject Mobil's Application because Mobil has not shown that the proposed merger will not result in a substantial lessening of competition.

The Commission should also reject Mobil's Application because Mobil has not shown that the proposed merger will not result in a substantial lessening of competition.

Base Oil Price

The following table shows the base oil prices for the various grades of oil used in the production of the various grades of asphalt. The prices are shown in dollars per ton. The prices are based on the current market prices of the various grades of oil. The prices are subject to change without notice.

Grade	Price
Grade 1	\$1.00
Grade 2	\$1.00
Grade 3	\$1.00
Grade 4	\$1.00
Grade 5	\$1.00
Grade 6	\$1.00
Grade 7	\$1.00
Grade 8	\$1.00
Grade 9	\$1.00
Grade 10	\$1.00

and the buying company offered a "spot" buying price, which traditionally is above a contract price.
