[BILLING CODE 6750 -01-P]

FEDERAL TRADE COMMISSION

16 CFR Part 432

RIN 3084-AB62

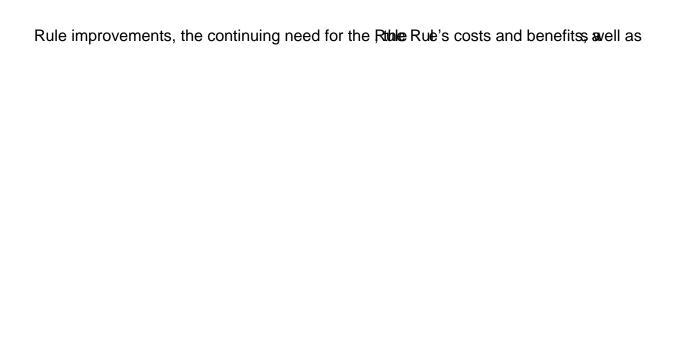

SUPPLEMENTARY INFORMATION:

Statement of Basis and Purpose

I. Background

The Commission promulgated the Amplifier Rule in 1974 to address sellers' failure to provide essential preurchase information regarding the performance of home entertainment amplifiers² Specifically, nanufacturers described the roducts' performance hrough power output claims(e.g., "25Watts"), but tested the templifiers under a variety of conditions and procedures that rendered different results for the same products but specifically, the form of the same products and the same products but specifically and the same products but specifically and the same products but the same products but specifically and the same products but specifi

under specified test conditions For example, amplifiers must be tested at an ambient air temperature of at least 7F°(25°

manufacturers' websites, FTC staff confirmed these widely divergent claimsed south different testing prameters

Based on the comments and FTC staff's review, the Commission found requiring disclosure of test conditions unlikely to prevent deceptive power output claimsest conditions are highly technical and require complex calculations to condense into applesoapples power output omparisons. If us, the average consumer is unlikely to understand or use the disclosed test conditions avoid deception. This problem is exacerbately the fact that consumers now shop online more quently, providing fewer opportunities to listen to equipment before purchasing.

To addresswidespreadmisleadingpower output claims, the Commissipoublisheda

Notice of Proposed Rulemaking N(PRM"), proposing an amendment to the Amplifier Rule to standardize the three testonditions ¹⁷ Specifically, the Commission proposite following standard values: (1) a load impedance of 8 ol(22) sa power band of 20 Hz to 20 kl(except for self-powered subwoofer syste) mand (3) a THD limit of less than 0.1%. FT Cast's review found amplifiers are generally designed to drive a nominal load impedance of 8 ohms; 20 Hz to 20 kHz covers the normal range of human healthround 0.1% THD does not audibly distort a

_

¹⁶ FTC staff has surveyed numerous academic articles finding that consumers are not able to effectively comprehend highly technical disclosures; no surveyed research found to the consumers. g Omri Ben Shahar Carl E. Schneider, he Failure of Mandated Disclosure 59 U. Pa. L. Rev. 647 (2011), available at http://www.jstor.org/stable/41149884 he Commission promulgated the Rule so consumers would not need to perform complex calculations to derive useful power ratings. It fount that to the Rule, consumers had to "deduct 10 to 25 percent [from the "music power" ratings previously claimed] and divide by 2" to derive power ratings that reflected normal usage. 39 FR 5388. Additionally the Commission has previously conclide at "an insufficient number of consumers. understand the meaning and significance. of disclosures concerning power bandwidth and impedance of R 3723 § 3723 (July 9, 1998).

¹⁸ The Commissions NPRM proposalexcluded amplifiers in selfpowered subwoofers used in systems that employ two or more amplifiers dedicated to different portions of the audio frequency spectrum from being tested over a

signal. Several commenters suggested these conditions and many manufacturers' specification sheets already disclose power outputs tested at 8 ohms, 20 Hz to 20 kHz, and at THD limits of, or slightly below 0.1%.

The Commission received ninuarique comments in response to the NPRMWhile most of the commenters either broadly suppositive regulation of ower output claims the standardization offest condition, we expressed concearbout the THD limit. They explained many vacuum tube and solid state amplificans uld not be able to qualify for a power output claim under the proposed 0.1% limit. Accordingly, hey recommende the Commission allow manufacturer to disclose their choser HD level rather than set a fixed limit. Additionally, one

power band of 20 Hz to 20 kHz. The Commission has previously recognize with that "standalone . . . amplifiers . . . must reproduce signals covering the full musical frequency bandwidth," before systems . . . incorporate crossover circuitry that filters out frequencies above the bass range," and the amplifiens wested subwoofer systems only amplify bass frequencies. 64 FR 38610, 386(18) 19, 1999). Consequently, the Commission proposato limit the power band for testing selfowered subwoofer amplifiers to the frequencie within those amplifiers' intended operating bandwidth. INFRM proposal require testing amplifiers in self powered full range loudspeakers, such as-failinge Bluetooth speakers that output more than two watts, over a power band of 20 Hz to 20 kHz.

commenter recommended placing the term total harmonic distortion with "THD with noise" or "THD+N," to align the Rule with the Commission's original interft.

In response to these commentates, Commissionissued a Supplemental Notice of Proposed Rulemaking ("SNRR") that modified the NPRM proposal tandardizing test conditions in threeways²³ First, it proposed updating the Rule's reference to "total harmonic distortion" with "total harmonic distortion plus noise" ("THD+N²⁴) Second, the Commission proposed raising the THD+N limit to 1.0% to address commenters' concern that a significant number of amplifiers on the markes innot qualify for any power output claim under the NPRM proposal's 0.1% limit. Third, the Commission proposed requiring sellers to designate power output disclosures under § 432.2 with the text "FTC Power Output Ratingther, if sellers make Optional Disclosures under § 2.4, they would have to state "This rating does not meet the FTC standard," to help consumers distinguish between the tree to the state of the state of

Additionally, the Commission propostemaking four nonsubstantive changes to update and clarifythe language of the Rule(1) eliminating unnecessary language in § 432.4 that currentlyincorporates §432.2's requirement to discloste test conditions(2) consolidating all standardized conditions a single section 432.3, to make the easy to use(3) modifying § 432.3(e) to clarify amplifiers must meet the tandard form pedance, power band, and THD+Nat all levels from 250 mW to the disclosted vel; and (4) updating § 432.4's prohibition against using an "asterisk" to make required disclostores flect modern usage

recommended against using the disclostres rating does not meet the FTC standard," distinguish Optional Disclosures under § 432.4 from FTC power output disclosures under § 432.2. CTA noted this phrase could have the unintercorrest quence of enigrating acceptable international standards by manufacture in making power output claims itheir Optional Disclosures.

III. Analysis of SNPRM Comments and Rule Amendment

Based on the record; Commission amends the Rtdestandardize the testin conditions proposed in its SNRR with one small exception. Specifically, the Rule as amended equires power output rating ander §432.2 to use ohms load impedance, 20 Hz to 20 kHz power band, and THD+N of 1.0% wo of the four SNPRM comments wholl supported the Commission's proposal and the remaining comments did not raise any issues that warrant modifying or supplementing these standard parameters. Specifically, the Commission will not require disclosure of supplemental information regarding the bandwidth used for testing the harmonics. As the commenter proposing the recommendation acknowledged, "since most people can't even hear the fundamental at 20kHz, let alone the second harmonic, there is no need to measure anything beyond 20kH²². The Commission agrees and declines to adopt this recommendation

The Commission also declines to adoptre commendation to allow manufacturers to set the power band and impedaparameters. While CTA stated in general territisat certain manufacturers produce mplifier devices not designed generate ower output accordance with the FTC standardest conditions it neither identified any affected manufacturers nor

³² E.W. Blackwood (SNPRI 4).

included data indicating the proportion of affected models addition, the amender lule does not increase costs for feeted manufacturers by equiring them to modify their products to meet the FTC standard, as suggested by CTAThe amended Rule only requires compliance with the FTC standard when sellers make power related slaling manufacture does not want to comply with the FTC standard, it need not make a claim Moreover, to the extent the manufacturer wants treatepower output using "in device" parameters different from the FTC standard, it may do susing Optional Disclosures under § 432.4.

ensure the advertised power claim does not mask lower power levels at which the amplifier would not meet the FTC's standard.

Fourth, the Commission pdates §

NPRM provided evidence regarding relief use of multichannel systems. Likewisheet SNPRM solicited commenten formalizing the Commission's 2010 guidanbet the Commission received none

V. Regulatory Analysis

Under Section 22 of the FTC Act, 15 U.S.C. 57 the Commission must issue a preliminary regulatory analysis for a proceeding mend a rule if the Commission: (1) estimates that the amendment will have an annual effect on the national economy of \$100 million or more; (2) estimates that the amendment will cause a substantial change in the cost or price of certain categories of goods or services; or (3) otherwise determines that the amendment will have a significant effect upon covered entities or upon consumets NPRM SNPRM, the Commission preliminarily determined that the proposed amendments to the Rule will not have such effects on the national economy, on the cost of sound amplification equipment, or on covered businesses or consumers. In developing these proposals, the Commission has sought to minimize prescriptive requirements and provide flexibility to sellers in meeting the Rule's objectives. The Commission regdebat received no commensisiomau(nt)]TJ0.005

regulatory purpose while minimizing burdens on small entitiese RFA requires that the Commission provide an Initial Regulatory Flexibility Analysis ("IRFA") with a proposed rule and a Final Regulatory Flexibility Analysis ("FRFA") with a final rule, if any, unless the Commission certifies that the rule will not have a significant economic impact on a substantial number of small entities.

The Commission believes that the amends menduld not have a significant economic impact upon small entities, althout they may affect a substantial number of small businesses. Specifically, the change in the disclosure requirements should not significantly increase the costs of small entities themanufacture or import power amplification equipment for use in the home. In the SNPRM, the Commission certifice that the proposed amendments would not, if promulgated, have a significant impact on a substantial number of small entities. Commission noted that, while a substantial number of the entities covered by the Rule likely qualify as small businesses, the Commission did not anticipate that the amendments sesult in higher costs for covered entities because manufacturers already test power output for their amplifiers. The Commission nonetheless determitted it was appropriate to the proposed amends mentsmall entities. The Commission received no comment garding the SNPRM's certification or IRFA. Therefore, based on available information, the Commission certifies that amending the Rule will not have a significant economic impact on a substantial number of small businesses.

Management and Budget ("OMB") regulations implementing the Paperwork Reduction Act ("PRA"). OMB has approved the Rule's existing information collection requirements through April 30, 2024 (OMB Control No. 3080/405). As described above, the Commission is proposing amendments simplify power output measurements by standardizing test parameters. The amendments do not change the frequency of the testing or disclosure requirements specified under the Rule. Accordingly, FTC staffestonot anticipate that this change will result in additional burden hours or higher costs for manufacturers who already trees output for their amplifiers, in many cases testing amplifiers under the conditions specified by the proposed amendments. Therefore, the amendments do not require further OMB clearance.

VIII. Congressional Review Act

Pursuant to the CongressionReeview Act (5 U.S.C. 801 et septhe Office of Information and Regulatory Affairs designated these rule amendments as not a "major rule," as defined by 5 U.S.C. 804(2).

List of Subjects in 16 CFR Part 432

Amplifiers, Home entertainment products, Trade practices.

For the reasons stated above, the this ion amens part 432 of title 16 of the Code of Federal Regulations as follows:

PART 432—POWER OUTPUT CLAIMS FOR AMPLIFIERS UTILIZED IN HOME ENTERTAINMENT PRODUCTS

1. The authority citation for part 4322ntinues to read:

Authority: 38 Stat. 717, as amended; (15 U.S.C58)1-

2. Revise 432.2 to read as follows:

§ 432.2 Required disclosures.

satellite speaker system that employs two or more amplifiers dedicated to different portions of the audio frequency spectrum, any power level from 250 mW to the rated power shall be

Other operating characteristics and technical specifications not required in § 432.2 may

be disclosed. Providethat:

(a) Any other power output is rated by the manufacturer, expressed in minimum watts per

channel, and clearly and conspicuously labellet "rating was not tested under the FTC

standard without the use of a footnote, asterisk, or similar notation to make the representation;

(b) All disclosures or representations made under this section are less conspicuously and

prominently made than any rated power output disclosure required in § 432.2. Any disclosure or

representation bold faced or more than **two**ds the height of any rated power output disclosure

required in § 432.2 is not less prominent; and

(c) The rating and testing methods to transfer the rating and testing methods to the rating and testing methods.

are well known and generally recognized by the industry at the time the representations or

disclosures are made, are neither intended nor likely to deceive or confuse consumers, and are

not otherwise likey to frustrate the purpose of this part.

By direction of the Commission.

April J. Tabor,

Secretary
